

Types of Pumps

Mud Pumps

Mud pumps are highly used in the industries where they have to deal with highly viscous liquids like oil, clay, emulsified water, etc. They are made using top quality materials and latest

technology to suit the increasing demand and effectiveness in its working. The mud pumps are offered at the most competitive price range according to the specification and modification done in it.

UHMWPE Pump

The UHMWPE pumps are the most sold type of pumps and are famous in the domestic as well as international market for their working accuracy and efficiency. They are suitable for many industries that deal with toxic and highly corrosive fluids. We develop them as per the industrial standards and even provide customization in UHMWPE pumps as per the requirement of the client.

Non Metallic Pump

We are the leading manufacturer of non metallic pumps highly used in various application areas like effluent treating plant, pharmaceutical industries, etc.

They are fabricated from the best quality of materials. These non metallic pumps are simple to operate and have smooth working. They are the perfect choice to pump strong acids and reactive chemicals.

Polypropylene Pumps

The polypropylene pumps are used to transfer the polluted liquids, reactive, corrosive and acidic fluids. They are developed under the guidance of our highly

skilled team of experts to ensure their working efficiency of the pumps. The polypropylene pumps are famous for its robust body and durability giving consistent performance.

Chemical Process Pump

The chemical process pumps are mostly used in the pumping corrosive acids, alkali and highly reactive chemicals. They are made according to the application areas

like textile industries, fertilizer industries, dyes industries, etc. The chemical process pump is made under the supervision of highly skilled professionals to ensure their efficiency in performance.
